Short Message Service (SMS) (Vessel Originated) - Per Message	\$0,42	\$0,10

Brommeland Elektronik AS is authorised to activate Iridium GMDSS services on Liberian Flagged vessels - Additional fees apply

Activation Fee	\$360,00
Deactivation Fee	\$360,00
Any Changes (included but not limited to: Emergency contact details/ship name and ownership changes)	\$240,00

Notes

- Details of the vessel, SIM and terminal are all required for an activation.
- GMDSS is a lifesaving service. Emergency Contact details must be kept up to date.
- The maximum number of Iridium GMDSS terminals on a vessel is 2.
- **Inclusive Minutes include Iridium to Fixed (PSTN/Cellular) only**

Features

- Distress Alert - Status, location and ID directly to an RCC.
- Safety Voice - Prioritised and pre-empted voice service directly to an RCC.
- Maritime Safety Information (MSI) - Information about the maritime environment (normally Navigational and Meteorological but also including Anti-piracy and Ice reports), to help mariners avoid dangerous conditions or situations.
- Truly global.
- Distress Alert Relay - Broadcast of distress situation information to vessels in the surrounding area.

onsatmail

- onsatmail is Brommeland Elektronik AS specialised compression email package designed for data transmission over low bandwidth services, such as Iridium low speed data (which does not operate efficiently with standard email services). onsatmail reduces connection time and uses compression to provide a fast and reliable email service over satellite connections. Furthermore, lower costs are achieved by using onsatmail with Iridium's optimised circuit switched data channel (RUDICS service).
